BC

STEPS	FEB	MAR	APR	MAY	JUNE	JULY	AUG	SEPT	OCT	NOTES
Seeding				AB				BC		The temperature must be between 15 °C and 20 °C for at least two weeks.
Raking		BC	AB						BC	The ground must no longer be soaked.
Aeration		BC	AB					BC		Use a lawn aerator to make holes 7 to 10 cm in depth.
Dethatching		BC	AB				AB	BC	BC	Proceed if thatch is more than 1.25 cm thick.
Lawn repairs				AB	AB		AB	BC		A temperature of 20 °C to 25 °C during the day and 14 °C to 18 °C at night facilitates germination.
White grub control			AB	AB	AB		AB	BC	BC	Water first and then keep lawn moist for 7 days.
Watering				AB	AB	AB	AB	BC	BC	Water once a week (for a total of 3 cm of water including rainfall), preferably in the morning.
Mowing				AB	AB	AB	AB	BC	BC	Cut your grass to a height of 8-10 cm. Avoid mowing more than 1/3 of the total height.
Feeding			AB	BC				BC	BC	C-I-L Restore Feed & Seed Lawn Fertilizer is perfect in the spring and fall.
Chinch bug control					BC	BC				Do not mistake chinch bug damage with symptoms of drought.
Sod webworm control		BC	BC	BC			BC	BC		Treat as soon as the first signs appear in late summer or as a preventative treatment in spring.
Overseeding		BC	AB					BC	BC	The temperature must be over 10 °C for optimal germination.
Weed control			AB	AB	AB	AB	AB	BC	BC	Remove the whole root. Doing that in the fall prevents weeds from reseeding.
European crane fly control			AB	AB	AB				AB	The treatment must target grub larvae.

* The periods suggested above may differ depending on the temperature.
